References and databases

- Introduction to dating — Relative dating, stratigraphy and dating methods
- Geologic and radiometric time — Radioactive decay and dating rocks
- Radiocarbon methods and results — Samples, measurement and calibration
- Radiocarbon calibration — BP and calendar ages
- Scientific dating methods — U–Th, luminescence and palaeomagnetism
- Dendrochronology and crossdating — Tree-ring matching and archaeology
- What are proxy data — Tree rings, ice, corals and pollen
- International Tree-Ring Data Bank — Ring-width, density and isotope records
- Glossary of Dendrochronology — Definitions of technical terms in English
- Wood anatomy databases — Japanese woods and wood identification
- Paleoclimate data search — Search multiple kinds of natural archive
- Scientific dating in practice — Planning dating and archaeological interpretation
- Engineering Statistics Handbook — Distributions, scatter plots, regression and checking
- Correlation and causality — Experimental design and interpreting relationships
- The plant body — Plant cells, tissues and organs
- Transport of water and solutes in plants — Water transport, stomata and transpiration
- Stems and plant growth — Primary growth, secondary growth and cambium
- Wood Handbook, Chapter 3 — Lesson 2: wood anatomy and growth rings
- Ring-growth anomalies: real examples — Lesson 2: wood anatomy and growth rings
- How do you measure the age of a tree? — Lesson 2: wood anatomy and growth rings
- Instructional crossdating exercises — Lesson 3: principles and crossdating
- Making skeleton plots — Lesson 3: principles and crossdating
- The dated master chronology — Lesson 3: principles and crossdating
- Finding the dates — Lesson 3: principles and crossdating
- Absent and false rings — Lesson 3: principles and crossdating
- Sample preparation and measurement — Lesson 4: sampling, measurement, detrending and chronology
- Tree-ring data and processing — Lesson 4: sampling, measurement, detrending and chronology
- dplR: detrending and chronologies — Lesson 4: sampling, measurement, detrending and chronology
- Spatial calibration in ImageJ — Lesson 4: sampling, measurement, detrending and chronology
- Interpreting tree-ring dates — Lesson 5: dendroarchaeology
- Horyuji central-pillar dating report — Lesson 5: dendroarchaeology

- Rook Hall Farm timber analysis — Lesson 5: dendroarchaeology
- Building dendrochronology database — Lesson 5: dendroarchaeology
- Izusan Gongen statue: timber and production dates — Lesson 5: dendroarchaeology
- Radial-growth averaging and disturbance history — Lesson 6: dendroecology
- Release criteria and prior growth — Lesson 6: dendroecology
- Fire-history data / IMPD — Lesson 6: dendroecology
- Giant sequoias and fire — Lesson 6: dendroecology
- Japanese black pine growth and air pollution — Lesson 6: dendroecology
- Fire history and postfire forest development — Lesson 6: dendroecology
- Cockchafer outbreaks and periodic narrow oak rings — Lesson 6: dendroecology
- Does insect induced defoliation affect anatomical structure of oak wood? — Lesson 6: dendroecology
- A whitebark pine cross section: fire, insects and death — Lesson 6: dendroecology
- Eastern hemlocks surviving insect infestation — Lesson 6: dendroecology
- Radial growth changes following hemlock woolly adelgid infestation — Lesson 6: dendroecology
- Mount St. Helens: a living laboratory — Lesson 6: dendroecology
- Irregular recurrence of large earthquakes: evidence from trees — Lesson 6: dendroecology
- The 1812 Wrightwood earthquake: tree rings and other evidence — Lesson 6: dendroecology
- Wrightwood tree-ring evidence and comparison trees — Lesson 6: dendroecology
- Reading the Tree Rings: a photo essay — Lesson 6: dendroecology
- Dendrochronological dating of volcanic activity — BG02: Japanese review of volcanic activity
- Early spring temperatures from Hinoki cypress — Lessons 7–8
- Integrating oxygen and hydrogen isotopes — Lessons 7–8
- The segment length curse — Lessons 7–8
- Tree-ring dates of excavated wooden containers — Lessons 7–8
- Nara archaeological tree-ring dataset — Lessons 7–8
- Introductory Statistics — Supplement BG03
- On the average value of correlated time series — Supplement BG03
- Quantitative techniques: tests and intervals — Supplement BG03
- Least squares — Supplement BG03
- Autocorrelation — Supplement BG03
- Chronological dating — Relative and absolute dating, with archaeological examples
- Relative dating — Ordering, stratigraphy and assumptions

- Absolute dating — Numerical age and the meaning of absolute
- Luminescence dating — Signals, stimulation and the starting event
- Radiocarbon samples and interpretation — Sample selection, contamination and carbon source
- Glossary of wood anatomy — Readings and definitions; check historical terminology in context
